SUPERVISORY PATENT

Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments have been fully considered but found not persuasive for reasons of record. Applicant argues that Bolt et al. teach away from dosage forms adapted for swallowing without prior disintegration in water or in the mouth because Bolt et al. disclose chewable tablets.

This is not persuasive because the limitation "chewable" is given little patentable weight since it does not materially change the physical composition disclosed by Bolt et al. Furthermore, since taste problems are associated with chewable tablets, it is obvious to one of ordinary skill in the art to have swallowed the tablet. Examiner views that the chewable tablets disclosed by Bolt et al. can be either swallowed or chewed before swallowing, which does not necessarily involve disintegration in the mouth.

Examiner respectfully reminds the Applicant that the limitation "adapted for swallowing with prior disintegration in water or in the mouth" will be given little patentable weight when all of the components of the instant invention are disclosed. Examiner then asks how this property is not present in the composition disclosed by Bolt et al. or how this property is only present in the instant invention. "Products of identical chemical composition can not have mutual exclusive properties." Any properties exhibited by or benefits from are not given any patentable weight over the prior and provided the composition is inherent. A chemical composition and its properties are inseparable. Therefore, if the prior and teaches the identical chemical structure, the disclosed properties are necessarily present. In re Spada, 911 F.2d 705, 709, 15 USPQ 1655, 1658 (Fed. Cir. 1990). See MPEP 2112.01. The burden is shifted to the applicant to show that the prior art product does not inherently possess the same properties as the instantly claimed product..
